Summary

I ship production software by directing AI coding agents. I own the product decisions, the architecture, the security posture and the testing, and I push each build through review cycles until it matches the design rather than merely running. Four products delivered this way: a subscription tool live on the Google Workspace Marketplace, an open-source explorer of 933 past Hedera hackathon projects, a wildfire alert system for Tunisia now in final pre-release testing, and a hiring platform in production for a European recruitment company.

Behind that sits six years of professional AI evaluation and language-quality work across Arabic and English, which is where the judgment comes from. I have spent thousands of hours finding where AI output is wrong, and I apply the same scepticism to the code these agents write.

Products Built With AI Coding Agents

SheetDiff: Spreadsheet Comparison Tool 2025 – present

Independent product, live and taking payments

- Google Sheets add-on that compares two versions of a spreadsheet and labels every row as unchanged, modified, moved, split, merged, added or deleted. Four comparison modes, multi-script text handling, batch runs against one baseline.
- Live on the Google Workspace Marketplace with paying subscribers; subscription billing through a merchant of record, licensing service, and a REST API exposing the same engine outside Sheets.
- Built from my own transcription-QA problem; I defined the classification rules and hand-verified engine output until it matched how a reviewer actually reads a transcript.

Jevadu: Explorer of Past Hedera Hackathon Projects 2026

Independent project, open source and live

- Brings together 933 past Hedera hackathon projects from 30 events on 6 sites, so a builder can see whether an idea was already built and a judge can check whether a submission's Hedera claims are real.
- Each project card sets the page's claims beside what the code calls and what its Hedera IDs actually did on the ledger. The AI never judges a project; every fact comes from the page, the code or the ledger, and 8,923 of 8,945 quotes match their source word for word.
- Python, FastAPI, htmx, PostgreSQL with pgvector, Docker, Gemini on Vertex AI, Hedera Consensus Service; 2,189 automated tests (pytest, Playwright with axe-core accessibility checks) run on every push in GitHub Actions. Public copy on Vercel and Neon, with per-visitor limits and a hard spending budget.

Matafi: Community Wildfire Alert Network 2026

Non-profit, final pre-release testing

- Android app in four languages plus a React moderation console: citizen fire reports alert everyone following that area within seconds, cross-referenced against NASA satellite detections.
- Flutter, Supabase (PostgreSQL + PostGIS), push notifications, Cloudflare. Offline report queueing with replay on reconnect, provable alert delivery with retry, and a full moderator audit trail.
- Designed the moderation model, verification thresholds, status lifecycle and abuse handling around how response actually works on the ground in Tunisia.
- Went from the foundational MVP to its current state in 15 days of continuous work, and is still in active development.
- matafi.mohamedyaakoubi.com/en

Career Portal: Recruitment Platform 2025 – 2026

Client project, in production

- Hiring platform for a company placing international workers with European employers: document-based applications, AI CV scoring, interview scheduling with automatic video links and calendar invites in the employer's timezone, and an HR pipeline dashboard with export.
- Next.js, TypeScript, Firebase, Google Gemini, Google Calendar API, deployed on Vercel. Layered request protection, threshold-based security alerting, content-verified file uploads.
- Unit, integration and cross-browser end-to-end suites (Playwright across three engines).
- github.com/mohamedyaakoubi/recruitment-portal • Live demo

Case studies of all four products, with screenshots: mohamedyaakoubi.com/ai_coding_agents_case_studies.pdf

Technical Skills

AI coding agents	Claude Code, GitHub Copilot, Codex, Antigravity; daily driver for design, implementation, review and test authoring
Languages	TypeScript, JavaScript, Python, SQL, C, Google Apps Script, HTML/CSS
Frameworks	React, Next.js, FastAPI, Flutter, Node.js/Express
Data & platforms	PostgreSQL, Firebase/Firestore, Supabase, Redis, Docker, Vercel, Cloudflare, GCP, Azure AI
Engineering practice	Git/GitHub, GitHub Actions CI, automated testing (Playwright, pytest, Vitest, pgTAP), REST API design, error tracking (Sentry), row-level access control, secrets management
AI data & language	LLM evaluation, RLHF annotation, search relevance, multimodal QA, machine translation post-editing
Human languages	Arabic (native), English (professional), French (limited), German (elementary)

Professional Experience

External Quality Assurance Jun 2026 – Present
DATAmundi Remote

- Audit annotation output from freelance annotators across multiple languages against project quality standards, and evaluate AI-generated responses for relevance, factual accuracy and completeness.
- Categorise recurring error patterns and escalate them to project managers through formal feedback workflows.

Language Data & Quality Reviewer Jul 2024 – Present
Volga Partners (contracted to Uber) Remote

- Evaluate and post-edit AI-generated Arabic and English content for fluency, contextual accuracy and cultural precision; deliver transcription, annotation and labelling for ASR, NER and intent-classification datasets.
- Assess multimodal model outputs for prompt alignment, reasoning and temporal coherence, and document recurring failure patterns to support reliability analysis.
- Run exploratory QA on client-facing annotation platforms, reporting functional and UX defects across submission and session-management flows.

Linguistic AI Evaluator, Arabic Maghrebi QA (Meta AI) Nov 2024 – Present
RWS Group Remote

- Evaluate multilingual prompts and model responses to refine large language models including Llama 4, ranking outputs on coherence, fluency, factual accuracy and cultural relevance.

AI Data Annotator & Search Relevance Evaluator Dec 2025 – Present
Lionbridge Remote

- Run two concurrent annotation workflows applying ESCI relevance logic to grade search results and classify user intent; resolve unjudgeable queries through cross-referenced product research.

Machine Translation Post-Editor (EN ↔ AR) Mar 2020 – Present
Unbabel Freelance, Remote

- Post-edited 1.6M+ words across 8,000+ Arabic–English tasks; identified recurring machine-translation error patterns and flagged them for model improvement.

Media Content & Metadata Specialist Apr 2025 – Feb 2026
Wirestock Remote

- Wrote structured metadata for video assets, ranked AI-generated images with written rationales, and moderated contributor submissions to maintain dataset quality.

Technical Content Writer & Web Operations Mar 2025 – Jun 2025
UbiAI Part-time, Remote

- Wrote technical tutorials on LLM fine-tuning and NLP, and audited the platform for UX, SEO and performance improvements.

Education & Recognition

Bachelor's Degree in Computer Science Sep 2024 – Jul 2027 (expected)
Faculty of Sciences, Sfax Sfax, Tunisia

Integrated Preparatory Cycle in Computer Science Sep 2021 – Jun 2024
Faculty of Sciences, Sfax Sfax, Tunisia

- Finalist, Abu Dhabi AI Spark Hackathon: top 10 of 25 teams, building a conversational search layer over the Abu Dhabi Open Data platform. mohamedyaakoubi.com/en/projects/potential
- Finalist, 1st AI Hackathon in Tunisia: top 10 of 26 teams; led a team building a career-guidance and CV-analysis tool.
